Day 4, 1st September 2016
Risk management

Danijel Bertović, expert

Risk management

- identification,
- assessment and
- prioritization of risks

Methods of risk management

identify, characterize threats

assess the vulnerability of critical assets to specific threats

determine the risk (*i.e. the expected chance and consequences of specific types of attacks on specific assets*)

identify ways to reduce those risks

prioritize risk reduction measures based on a strategy

How to develop risk management plan

Define your project

Get input from others - brainstorm on risks. Get several people together that are familiar with the project and ask for input on what could happen, how to help prevent it, and what to do if it does happen. Take a *lot* of notes!

Identify the consequences of each risk

Eliminate irrelevant issues

List all identified risk elements - You don't need to put them in any order just yet. Just list them one-by-one.

Assign probability - for each risk element on your list, determine if the likelihood of it actually materializing is Critical, Serious, Moderate or Minor.

Assign impact - assign Impact as Critical, High, Medium or Low based

Determine risk for the element - use next table for this.

Probability	Impact			
	Low	Medium	High	Critical
Critical	Yellow	Red	Red	Red
Serious	Green	Yellow	Red	Red
Moderate	Green	Yellow	Yellow	Red
Minor	Green	Green	Green	Yellow

**Rank the risks,
Develop contingency plans**

Introduce your risk management plan
